

## IDG Metadata Specifications for:

### Tissue

**Importance** 1: Required, 2: Required if available, 3: Optional

IDG Field Name	Definition	Importance
Name	Name of tissue sample	1
Species	Organism from which tissue was isolated (genus and species)	1
NCIt_ID	NCIt identifier of tissue type	1
NCI_sample_ID	NCI registration sample ID for tissue, if relevant	1
Disease_name	If tissue is disease associated, formal, canonical name	2
Disease_ID	If tissue is disease associated, formal, canonical id from Disease Ontology	2
Donor_disease_site_onset	Site of disease onset in tissue donor	2
Donor_disease_age_onset	Age of disease onset in tissue donor	2
Donor_disease_age_onset_unit	Unit of age of disease onset in tissue donor	2
Donor_disease_duration	Disease duration in tissue donor; Age of sample acquisition - Age of onset	2
Donor_disease_duration_unit	Unit of disease duration in tissue donor; Age of sample acquisition - Age of onset	2
Donor_age	The age of the donor when the sample was obtained	2
Donor_age_unit	Unit of the age of the donor when the sample was obtained	2
Donor_gender	Describes sex of the organism from which the sample was obtained	2
Donor_ethnicity	For human samples, the ethnicity of the donor	2
Vendor	Name of commercial vendor tissue was obtained from, if purchased	2
Vendor_cat	Catalog ID of vendor if tissue was purchased	2
Mouse_ID	Mouse ID if derived from a mouse line	2
